

PRESS RELEASE

EcofinConcept realizes the marketing of 6.9 MWp solar parks Institutional investor relies on EcofinConcept's know-how

Hückelhoven, June 23rd, 2021 EcofinConcept GmbH - specializing in renewable energy projects - is successfully marketing two solar power plants to an institutional investor.

The solar parks with a total nominal output of around 6.9 megawatt peak (6,900 kWp) and an investment volume of around EUR 6 million were put into operation between December 2020 and May 2021 on commercial properties in Thuringia and Saxony-Anhalt.

The energy generated in the two solar parks is remunerated according to feed-in tariffs from successful tenders by the Federal Network Agency (BNetzA) and fed into the networks of regional energy providers. The solar systems will produce around 7.2 million kWh of CO₂-free energy annually, which corresponds to the electricity consumption of around 2,050 three-person households.

The solar parks were equipped with monocrystalline solar modules from the manufacturers Hanwha Q-Cells and JA-Solar as well as Huawei inverters. Product guarantees of up to 12 years have been concluded for the components. Online-based monitoring systems ensure ongoing 24/7 system monitoring.

“A nice proof of the transaction power of our team, also against the background of the special challenges during the corona pandemic. We would like to thank all those involved for the absolutely professional and trusting cooperation and are happy about the successful solar park transactions.”, said Guido Vieten and Christian Sperling from EcofinConcept.

Further solar and wind projects are currently in the examination or implementation phase, and a wind farm transaction is about to be finalized.

About EcofinConcept:

EcofinConcept GmbH has specialized 100% in renewable energies. In addition to classic consulting services, the range of services primarily includes the acquisition of existing and turn-key projects for private and institutional investors, project development, commercial due diligence, transaction support and the development of investment opportunities.

References in short: Project management, conception, development, structuring, financing and / or marketing of more than 95 projects with an investment volume of more than 604 million EUR and an installed nominal output of over 380 MW. Own plants are operated in subsidiaries and sister companies.
