

PRESS RELEASE

EcofinConcept supports private investor with the purchase of an existing Enercon wind turbine

Hückelhoven, May 18, 2021 - EcofinConcept GmbH - the specialist for renewable energy projects - has supported a German private investor in the transaction and supplementing its wind turbine portfolio with another existing Enercon wind turbine.

The wind power plant with a nominal output of 800 kW, a hub height of 73 m and a rotor diameter of 53 m is located at a location near an autobahn in Lower Saxony and has been in operation since 2007. In accordance with the Renewable Energy Sources Act (EEG), the CO₂-free energy produced is fed into the regional power grid.

The operational turbine on a long-term leased property was sold along with all contracts, rights and permits as part of an asset deal. The purchase, including the examination phase and all negotiations, was completed within 6 weeks thanks to the good and professional cooperation of the parties involved.

“We are delighted with the successful transaction, especially under the conditions made more difficult by the corona pandemic, and the win-win situation created for the parties involved. We are currently looking for further wind farms and single wind turbines as well as suitable project locations, ”says the management of EcofinConcept GmbH.

About EcofinConcept:

EcofinConcept GmbH has specialized 100% in renewable energies. In addition to classic consulting services, EcofinConcept's range of services primarily includes the acquisition of projects for investors, commercial due diligence, project development and brokerage, transaction support and the procurement of project financing as well as the conception of investment opportunities.

References in short: Project management, conception, development, structuring, financing and / or marketing of more than 90 projects (wind parks, single wind turbines, solar parks, solar systems, biogas systems) with an investment volume of more than EUR 595 million and an installed nominal output of more than 370 MW. Own plants are operated in subsidiaries and sister companies.
