

PRESS RELEASE

EcofinConcept GmbH successfully accompanies wind power transaction

Hückelhoven, January 26, 2022 - EcofinConcept GmbH, which focuses on renewable energies, has accompanied a strategic investor in the takeover of a wind farm operating company as part of a share deal. The previous Danish owner of the wind turbines would like to change his investment focus and not deal with continued operation or repowering of this wind farm himself.

The buyer has thus expanded its portfolio to include two wind turbines in the 1.5 and 2 MW classes. There is great potential for repowering in the coming years at both of the turbine locations.

The annual energy yield can be increased by a factor of 6 at one of the established wind farm locations and by a factor of 3.5 at the second location. The expected yield will increase from currently around 6.5 million kWh p.a. to 28.5 million kWh per year. The plant replacement is planned in each case with a wind turbine of the 6 MW class. The planning areas are located in designated wind priority areas in northern and north-eastern Germany.

EcofinConcept is currently acquiring further wind farms and single wind turbines for institutional and private investors and is preparing the projects in accordance with the requirements of the buyer.

About EcofinConcept:

EcofinConcept GmbH has specialized 100% in renewable energies. In addition to classic consulting services, the range of services primarily includes the acquisition of existing and turn-key projects for private and institutional investors, project development, commercial due diligence, transaction support and the development of investment opportunities.

References in short: Project management, conception, development, structuring, financing and / or marketing of more than 95 projects with an investment volume of more than 604 million EUR and an installed nominal output of over 380 MW. Own plants are operated in subsidiaries and sister companies.
